

Science of BepiColombo MMO

Masaki Fujimoto[1]

[1] ISAS, JAXA

Bepi Colombo MMO, Mercury Magnetosphere Orbiter, will be launched in 2014 and will arrive at Mercury in 2020. While various science ideas were put into the proposal and have been put forward since the proposal was successfully accepted, now would be another good time to re-fresh our thinking because

- nice results by Kaguya of plasma environment around the Moon has come out
- exciting initial results by MESSENGER in orbit around Mercury is coming out

The talk is intended to guide the re-freshing tour that would motivate the audience to start to do something related to the Hermean magnetospheric science NOW but NOT LATER.
